					Sarapiquí	29.0	21.0

General comment

This Thursday the same atmospheric pattern on the country continues. The system of low pressure stationary in the southwest of the Caribbean Sea, off the coast of Nicaragua that maintains the Intertropical Convergence Zone in the Pacific Ocean over Costa Rica.

Due to this, the rainy conditions in the Slope of the Pacific, with isolated rains from the first hours of the morning, but the most intense are expected for the afternoon. Part of these rains will reach the Centras Valley, where occasional rains of varying intensity will occur throughout the day.

On the other hand, in the North Zone and the Caribbean they will be dispersed and concentrated near the mountains.

Ephemeris (San José)
